## Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

## Listing of Claims:

(Currently Amended) A piezoelectric/electrostrictive film device comprising:
a substrate which is formed of ceramic; and

a piezoelectric/electrostrictive operation portion including a lower electrode, piezoelectric/electrostrictive layer, and upper electrode which are successively stacked on the substrate and including a projecting end of the piezoelectric/electrostrictive layer with which an upper surface of the lower electrode and a lower surface of the upper electrode are <u>not</u> coated, <u>wherein</u>; <u>and</u>

a coupling member extending between saida projecting portionend of the piezoelectric/electrostrictive layer and the substrate and being coupled to the substrate. wherein theis a coupling member constituted of comprises a hybrid material in which inorganiesilica particles are scattered in a matrix containing a polysiloxane polymer as a main component of a polymer compound, and is coupled to the substrate.

## Claim 2 (Cancelled)

3. (Currently Amended) The piezoelectric/electrostrictive film device according to claim 21, wherein the polysiloxane polymer is a polysiloxane polymer in which a substituent group is introduced in a part shown in the following general formula (1):

$$-\mathbf{o} = \begin{bmatrix} \mathbf{R} \\ \mathbf{Si} - \mathbf{O} \end{bmatrix} \qquad \cdots \qquad (1)$$

where R is at least one alkyl group selected from a group consisting of a methyl group, ethyl group, and propyl group, an aryl group, an alkenyl group, or at least one

substituent alkyl group selected from a group consisting of a γ-methacryloxypropyl group,  $\gamma$ -glycidoxypropyl group,  $\gamma$ -chloropropyl group,  $\gamma$ -mercaptopropyl group,  $\gamma$ aminopropyl group, and trifluoromethyl group.

(Currently Amended) The A piezoelectric/electrostrictive film device 4. comprising: according to claim 1, wherein an average particle diameter of the inorganic particles is in a range of 5 nm to 1 µm.

a substrate which is formed of ceramic;

a piezoelectric/electrostrictive operation portion including a lower electrode. piezoelectric/electrostrictive layer, and upper electrode which are successively stacked on the substrate and including a projecting end of the piezoelectric/electrostrictive layer with which an upper surface of the lower electrode and a lower surface of the upper electrode are not coated; and

a coupling member extending between said projecting end of the piezoelectric/electrostrictive layer and the substrate and being coupled to the substrate, wherein the coupling member comprises a hybrid material in which inorganic particles having an average particle diameter of 5 nm to lum are scattered in a matrix of a polymer compound.

- The piezoelectric/electrostrictive film device according to claim 5. (Original) 4, wherein the inorganic particles have a two-peaks particle size distribution, and a ratio (D/C) of an average particle diameter (C) of large-diameter inorganic particles having a particle diameter larger than that corresponding to a inflection point existing between two peaks to an average particle diameter (D) of small-diameter inorganic particles having a particle diameter not more than that corresponding to the inflection point is in a range of 0.05 to 0.7.
- 6. (Currently Amended) A piezoelectric/electrostrictive film device comprising: a substrate which is formed of ceramic; and

Page 3 of 7

a piezoelectric/electrostrictive operation portion including a plurality of electrodes and a plurality of piezoelectric/electrostrictive layers which are alternately stacked on the substrate and including a projecting end of each piezoelectric/electrostrictive layer with which upper and lower surfaces of each electrode are not coated, wherein; and

a coupling member extending between said projecting portionend of the piezoelectric/electrostrictive layer and the substrate and being coupled to the substrate, wherein their a coupling member constituted of comprises a hybrid material in which inorganicallica particles are scattered in a matrix containing a polysiloxane polymer as a main component of a polymer compound, and is coupled to the substrate, and the electrodes are disposed in uppermost and lowermost layers in a multilayered structure of the piezoelectric/electrostrictive layers and electrodes.

## Claim 7 (Cancelled)

8. (Currently Amended) The piezoelectric/electrostrictive film device according to claim 76, wherein the polysiloxane polymer is a polysiloxane polymer in which a substituent group is introduced in a part shown in the following general formula (1):

$$-0 = \begin{bmatrix} R \\ -Si - O \end{bmatrix} \cdots (1)$$

where R is at least one alkyl group selected from a group consisting of a methyl group, ethyl group, and propyl group, an aryl group, an alkenyl group, or at least one substituent alkyl group selected from a group consisting of a  $\gamma$ -methacryloxypropyl group,  $\gamma$ -glycidoxypropyl group,  $\gamma$ -chloropropyl group,  $\gamma$ -mercaptopropyl group,  $\gamma$ -aminopropyl group, and trifluoromethyl group.

9. (Currently Amended) <u>A</u>The piezoelectric/electrostrictive film device according to claim 6, wherein an average particle diameter of the inorganic particles is in a range of 5 nm to 1 μm comprising:

a substrate which is formed of ceramic;

a piezoelectric/electrostrictive operation portion including a plurality of electrodes and a plurality of piezoelectric/electrostrictive layers which are alternately stacked on the substrate and including a projecting end of each piezoelectric/electrostrictive layer with which upper and lower surfaces of each electrode are not coated; and

a coupling member extending between said projecting end of the piezoelectric/electrostrictive layer and the substrate and being coupled to the substrate, wherein the coupling member comprises a hybrid material in which inorganic particles having an average particle diameter of 5 nm to 1µm are scattered in a matrix of a polymer compound, and the electrodes are disposed in uppermost and lowermost layers in a multilayered structure of the piezoelectric/electrostrictive layers and electrodes.

10. (Original) The piezoelectric/electrostrictive film device according to claim 9, wherein the inorganic particles have a two-peaks particle size distribution, and a ratio (D/C) of an average particle diameter (C) of large-diameter inorganic particles having a particle diameter larger than that corresponding to a inflection point existing between two peaks to an average particle diameter (D) of small-diameter inorganic particles having a particle diameter not more than that corresponding to the inflection point is in a range of 0.05 to 0.7.

Claims 11-23 (Cancelled)
